

Method

Scientific experiments need to be planned out carefully so that we can ensure that we have made a fair test and know what we are doing. It is important that we consider what it is that we are trying to find out.

I am trying to find out:

I am going to do this by:

Example:

I am trying to find out which drink is worst for the health of our teeth. I am going to do this by putting a piece of eggshell in 4 different cups with 4 different drinks. The eggshell that is most badly damaged will contain the drink that is worst for our teeth.
